Changes made to EER:

- household : postal_code is N:1 relationship with mandatory on household
- Removed entity battery_storage
- Removed attributes isDeleted from both power_generator and appliance entities
- Removed attribute off_the_grid as off-the-grid households can be inferred from no utilities
- Removed attribute reg_thermostat_setting
- Removed “Many” disjoint relationship from air_handler
- Removed heating_cooling_method attribute from air_handler
- Changed all casing to lower snake case to match EER2Relation Mapping
- Changed attributes has_heating to heat_setting and has_cooling to cool_setting as before we were implying that these were Booleans but now interpreting them as INTEGERS that are nullable
